

sustainability

Sustainability is very important to us

We avoid heavily processed, environmentally damaging materials such as steel, concrete and cement.

Timber is a renewable resource, with oak farms providing a stable natural habitat for wildlife and the landscape - oak also requires very little energy to convert into a building component.

We have an award winning waste minimisation policy - recognised as a unique approach to reducing, recycling and reusing building materials.

Our buildings are superlatively insulated, using the finest natural materials with low embodied energy.

We have a wide portfolio of designs including homes that are virtually airtight, with minimal thermal bridging and passive solar capture.

Oak acts as a Carbon Store - absorbing atmospheric carbon indefinitely.

Border Oak is fully accredited and approved by FSC® and PEFC - ensuring that all of our timber is ethically and environmentally responsible.

Our Timber Procurement Policy is independently verified by the FSC to promote sustainable purchasing standards across everything we do.

Our Artisan cassette panels can meet Levels 4, 5 and 6 on the Code for Sustainable Homes with A grade EPC ratings.

We are the only oak frame company to offer a complete build service - including exclusive access to environmental consultants and partner companies who offer impartial guidance with regard to certification and renewable technologies.

Border Oak - the most sustainable oak framed homes available
